You may not add parameters or change the output.

## Introduction

In programming there is a notion of a "one-liner", meaning a solution that can be expressed in only one line. Another important convention is that a line should never exceed 80 characters of width.

## Problem

Write a cross product function in less than 80 characters.

## Example

```
> (ch1 ' (1 2 3) ' (a b c))  
((1 . a) (1 . b) (1 . c))  
 (2 . a) (2 . b) (2 . c))  
 (3 . a) (3 . b) (3 . c))
```
